

HURRICANE SHUTTERS

BEST HURRICANE
PROTECTION ON THE MARKET

WHY CHOOSE OUR HURRICANE SHUTTERS OVER THE REST?

Superior Hurricane Shutters: Unmatched Performance and Durability

At Indoors B.V., we offer Miami Dade and Florida Building Code Compliant shutters, specifically tested and certified for High Velocity Hurricane Zones (HVHZ). Our shutters are tested and approved to withstand pressure loads equivalent to over 270 mph winds, typical of a Category 5 hurricane.

Manufactured in certified U.S. factories, our shutters ensure exceptional protection and reliability.

Every component used in our shutters is rigorously tested and specified in our product approvals, ensuring you receive the quality and assurance you deserve. Can others provide the same?

Indoors B.V. guarantees expert installation for maximum protection and longevity.

Anyone can build shutters, but can they guarantee they will withstand a storm? Can they promise reliable performance and long-lasting durability?

Our shutters are tested and approved to withstand category 5 pressure loads.

TESTED & CERTIFIED HURRICANE SHUTTERS

Ensuring Safety with Certified Products

Our hurricane shutters are tested & certified by Miami Dade County and certified with Florida Building Code. The Florida Building Code (FBC) sets stringent rules for construction and architectural elements to ensure the safety and performance of products. To comply with FBC, products must undergo rigorous testing to achieve certification. These tests assess the materials' resistance to various weather conditions.

We sell Miami Dade County tested & certified hurricane shutters compliant with Florida Building Code.

Certified shutters have undergone stringent tests, ensuring they can withstand destructive winds over 270 mph.

Choose Indoors B.V. for your safety needs—be prepared for extreme weather.

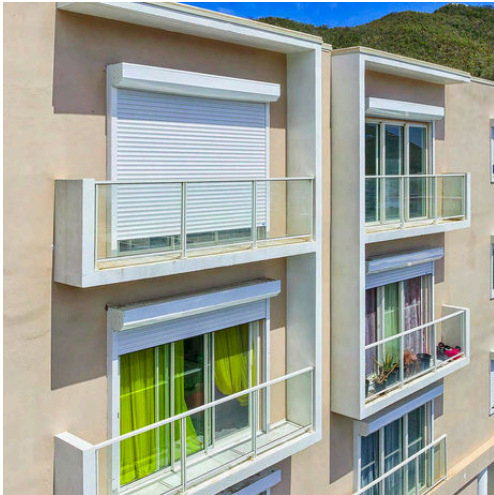

Comprehensive Testing Procedures

Miami Dade County testing procedures evaluate the capacity of products to withstand flying debris, water, and air penetration. This includes:

- Large & Small Missile Tests
- Cyclic Pressure Loading

Products are subjected to increasing pressures, simulating hurricane conditions. Water is applied, and air is exhausted to create hurricane-grade pressure, testing the durability of shutters, doors, and windows.

Liron and his team are true professionals. They are experts at their jobs and also ensure that you are left with a beautiful end product that will withstand the test of time and storm.

RENALDO SEALEY

Operations Manager, Sol Antilles N.V.

Great attention to detail and timely service in the event of emergencies.

BENJAMIN ORTEGA

Facility & Maintenance Manager, Port of St. Maarten

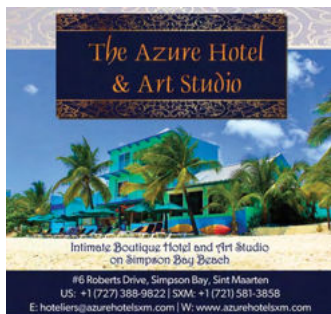

I work with Indoors B.V. more than 8 years. I would surely recommend them. They are result oriented.

TESTIMONIALS

MIKE

Azure Hotel Sint Maarten

After hurricane Irma, we decided that our home and hotel needed a serious upgrade with hurricane resistant windows, doors, and shutters. I was very impressed with the materials that Indoors uses. Previously, we had purchased windows doors and shutters from a company in Florida that was reported to be one of the best in the world when it comes to the Miami Dade code for hurricane prone areas. When I compared those products to the ones we bought from Indoors I found that Indoors had a superior product to even that highly rated company in the States The team at Indoors is very reliable, and competent. Not only did they know how to install their products seamlessly, but they also were able to work with the materials that we had in place already. Liron and his team do an excellent job. When we needed a few minor adjustments done they were quick to return to the property and make the necessary corrections. If you are looking for a superior product with excellent service look no further, I highly recommend Indoors and will be doing business with them again in the future.
